

WALK TEST

In order to identify if patient qualifies for Oxygen they must first be tested off Oxygen at rest and have SpO2 of 88% or less on RA, OR a SPO2 of 88% or less with exertion. Then tested on Oxygen to show improvement with supplemental Oxygen.

Oxygen flow	SpO2	Distance (Feet)	Time	Reason stopped
RA (Rest)				
RA (Peak Exercise)				
2 LPM rest				
2 LPM Exercise				
() High LPM rest				
() High LPM Exercise
